

SPECTRUM REQUEST

In preparation for the Milano Cortina 2026 Winter Olympic and Paralympic Games, it is hereby announced that the use of wireless devices at the Games venues requires a temporary authorisation for radio frequency (RF) usage. This authorisation must be requested from the Ministry of Enterprises and Made in Italy (MIMIT), coordinated through the Organizing Committee.

Those intending to use wireless services during the Games, including local broadcasters with existing licenses (e.g., local TV networks), must submit their applications via the official Games portal (Spectrum Booking Portal). Existing permanent authorisations will be reconfirmed, while all other requests will be approved or denied based on frequency availability and policies outlined in the [Spectrum Availability Plan](#). This document provides detailed information about the application periods and the expected timeline for receiving an authorisation.

Devices that receive an authorisation certificate from MIMIT must undergo testing and tagging at designated Test & Tagging (T&T) stations. Appointments for T&T must be booked in advance through the official portal. Only devices that have been tagged will be authorized for use at the Games venues. Unauthorised devices must remain switched off to avoid penalties, including the possible revocation of accreditation.

Access to the Spectrum Booking Portal is restricted to authorised users only. Those who have not yet obtained the necessary authorisation are invited to contact the dedicated team at the following email address: spectrummanagement@milanocortina2026.org.

1 **REGISTRATION**

All radio frequency users (including permanent licence owners) need to register their equipment via the **Spectrum Booking Portal**.

2 **FREQUENCY REQUEST**

MIMIT receives the frequency request and checks for availability.

3 **RESULT NOTIFICATION**

Requested frequency is **confirmed or rejected** according to availability.

4 **TEST & TAG PREPARATION**

Appointment booking via **Spectrum Booking Portal** and equipment frequency setting.

5 **EQUIPMENT TESTING AT THE T&T STATION**

If it is compliant with the specifications, the device is **tagged positively**.

6 **EQUIPMENT USE**

The radio equipment that passed the test can be used only for the designated venue.
